Flow Indicator with Self Cleaning Mechanism Model DAA

Description

KOBOLD's DAA flow indicator features a self-cleaning mechanism to guarantee rotor visibility. Most types of flow indicators suffer visibility problems as the result of residue build-up on the viewing windows. These traditional indicators usually require a plant shutdown to remove and restore them. Unfortunately, dirt build-up does not usually correspond to planned shut-downs. Enter, the KOBOLD DAA! With a simple twist of the sight glass, integral wipers eliminate build-up which is then washed away by the media's flow. The DAA will save you both fuss and downtime.

Specifications

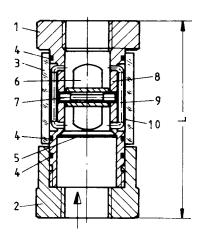

Max. Temperature: 212° F Max. Pressure: 232 PSIG

Component Materials

Ref.	Component	Material			
	Component	Brass	Stainless Steel		
1	Fitting	Ni-Plated Brass	303 SS		
2	Inlet	Ni-Plated Brass	303 SS		
3	Transparent Cylinder	Borosilicate Glass	Borosilicate Glass		
4	O-Rings	NBR	FKM		
5	Orifice	Nickel-Plated Brass	303 SS		
6	Rotor*	POM	PTFE		
7	Rotor Spindle	303 SS	303 SS		
8	Support Bars	Ni-Plated Brass	303 SS		
9	Wiper Yokes	301 SS	301 SS		
10	Wipers	Polyolefin	FKM		

^{*}Rotor color red for models DAA-..08 through DAA-..25; rotor color white for models DAA-..32 and DAA-..40
