HART
COMMUNICATION FOUNDATION

- Span: 0.3" W.C. ... 6" W.C. to 60...6000 PSIG
- Static Pressure: Max. 4500 PSIG
- t_{max} : 248 °F
- Process Connection: 1/2" NPT, 1/4" NPT, or Various Diaphragm Seals Available upon Request
- Material: Stainless Steel
- Various Outputs: 4 ... 20 mA or Frequency Output
- Sensor Inputs: Differential, Gauge, or Absolute Pressure
- Digital Communication with HART® Protocol

Order from: **C A Briggs Company**

Heavy Duty Differential Pressure Transmitter Model PAD

Features

Superior Performance

- High Reference Accuracy
- Long-term Stability (0.125 % URL for 3 Years)
- High Rangeability (100:1) for Range 4-0

Flexibility

- Data Configuration with HART® Communicator
- Zero Point Adjustment

Reliability

- Continuous Self-diagnostic Function
- Automatic Ambient Temperature Compensation
- EEPROM Write Protection
- Fail-mode Process Function
- CE EMC Conformity Standards (EN 50081-2, EN 50082-2)

Transmitter Description

Electronics module

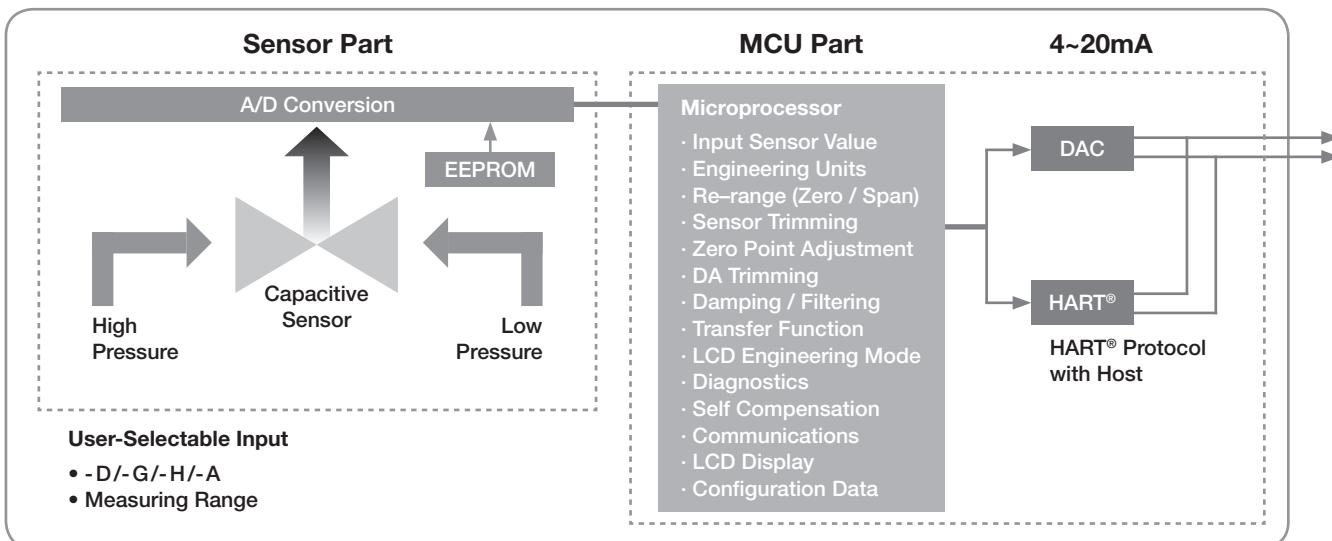

The Electronics module consists of a circuit board sealed in an enclosure. There is an MCU module, an analog module, an LCD module and a terminal module within the transmitter. The MCU module acquires the digital value from the analog module and applies correction coefficients selected from EEPROM. The output section of the MCU module converts the digital signal to a 4...20 mA output. The MCU module communicates with the HART®-based communicator or control system such as DCS. The power section of the MCU module has a DC-to-DC power conversion circuit and an input/output isolation circuit. The LCD module plugs into the MCU module and displays the digital output in a user-configured unit.

Description

The KOBOLD Differential Pressure Transmitter model PAD is a microprocessor based high performance transmitter. It has flexible pressure calibration and output, automatic compensation of ambient temperature and process variables, configuration of various parameters, and communication with HART® protocol. It measures pressure, flow and level by an application method. All data is input, modified and stored in EEPROM.

The KOBOLD Pressure Transmitter is also available as a flow meter. The flowmeter model PAD-F has an added totalizing function. It is able to check the flow rate and the totalizing flow. It measures the flow rate by using differential pressure without compensation for the temperature and static pressure. The shape of the PAD-F is the same as the standard device. Only the terminal block is different, since there are two more terminals for the display of the pulse output.

Functional Block Diagram

Sensor Inputs

The models PAD-D, PAD-G, and PAD-H are available in a capacitance type differential pressure sensor. It measures differential and gauge pressure and is commonly used in flow and level applications. Both sides in the capacitance sensor transmit process pressure from the process isolators to the sensor. The model PAD-A is also available in a piezoresistive type absolute pressure sensor. The sensor module converts the capacitance or the resistance to the digital value. The MCU module calculates the process pressure based on the digital value.

The sensor modules include the following features

- The software of the transmitter compensates thermal effects, improving performance.
- Precise Input Compensation during operation is achieved with temperature and pressure correction coefficients that are characterized over the range of the transmitter and stored in the sensor module EEPROM memory.
- EEPROM stores sensor information and correction coefficients separately from MCU module, allowing for easy repair, reconfiguration and replacement.

Basic Setups

The following settings can be easily configured from any host that supports the HART® protocol:

- Operational Parameters
- 4-20 mA Points (Zero/Span)
- Engineering Units
- Damping Time: 0.25...60 sec
- Tag: 8 Alphanumeric Characters
- Descriptor: 16 Characters
- Message: 32 Characters
- Date: Day/Month/Year

Calibration and Adjustment

- Lower/Upper Range (Zero/Span)
- Sensor Zero Trimming
- Zero Point Adjustment
- DAC Output Trimming
- Transfer Function
- Self-Compensation

Self-Diagnosis and others

- CPU & Analog Module Fault Detection
- Communication Error
- Fail-mode Handling
- LCD Indication
- Temperature Measurement of Sensor Module

Multi Planar Process Connection

When the pressure transmitter should be vertically installed irrespective of the orientation of the process connection lines, modified flanges (as shown above) are required in addition to the basic flanges. Multi-planar pressure transmitters have been made in an effort to solve the problems occurring in these types of installation. The object of this is to provide a pressure transmitter, capable of being vertically installed, without separate adapters or various types of brackets. This is regardless of the position of the process connection lines.

Process Connection Via Diaphragm Seals

When connecting the differential pressure transmitter model PAD to all different process connections, diverse diaphragm seal versions are necessary. They can be connected to the differential pressure transmitter by direct mounting or via a capillary tube. Depending on the application, different combinations of diaphragm seals, capillary tubes and fill fluids are available. To clarify those options, the special connections via diaphragm seals should be specified separately for the differential pressure transmitter.

Heavy Duty Differential Pressure Transmitter Model PAD

Technical Details

Measuring Principle:	Capacitance Sensor (PAD-D, -F, -G, -H) Piezo-resistive (PAD-A)
Measuring Span:	0.3" W.C..6" W.C. to 60...6,000 PSIG bar (Depending on Instrument Version) Zero and Span Values can be set anywhere within the Range Limits. Span must be Greater than or Equal to the Minimum Span.
Accuracy Range 2:	$\pm 0.25\%$ of Span for $0.1 \text{ URL} \leq \text{Span} \leq \text{URL}$ $\pm [0.24 + (0.008 \times (\text{URL}/\text{Span}))] \% \text{ of}$ Span for $0.05 \text{ URL} \leq \text{Span} \leq 0.1 \text{ URL}$
Range 3:	$\pm 0.075\%$ of Span for $0.1 \text{ URL} \leq \text{Span} \leq \text{URL}$ $\pm [0.25 + (0.005 \times (\text{URL}/\text{span}))] \% \text{ of}$ Span for $0.02 \text{ URL} \leq \text{Span} \leq 0.1 \text{ URL}$
Range 4 to 0:	$\pm 0.075\%$ of Span for $0.1 \text{ URL} \leq \text{Span} \leq \text{URL}$ $\pm [0.025 + (0.005 \times (\text{URL}/\text{Span}))] \% \text{ of}$ Span for $0.01 \text{ URL} \leq \text{Span} \leq 0.1 \text{ URL}$
Stability:	$\pm 0.125\%$ URL for 36 Months
Static Press. Effect:	$\pm 0.1\%$ URL per 70 bar (Zero Error) $\pm 0.2\%$ of Reading per 70 bar (Span Error)
Turndown Ratio:	Ranges 4 ~ 0 = 100:1 Range 3 = 50:1 Range 2 = 20:1
Process Temp.:	-40...248°F (Approval Codes may Affect Limits. Max. Ambient Temperature at LCD = 176 °F.) -22...176°F
Ambient Temp.:	$\pm (0.019\% \text{ URL} + 0.125\% \text{ Span}) / 28 \text{ }^{\circ}\text{C}$
Ambient Temp. Effect:	-40...185°F (Non-condensing)
Storage Temp.:	5 %...100 % RH
Humidity Limit:	Power Supply Effect: $\pm 0.005\%$ of span per Volt Mounting Pos. Effect: Zero Shift up to 350 Pa, no span effect
Pressure Limits (with Silicone Oil)	(Valid for stand-alone instruments only without assembled diaphragm seals.)
Model D and G:	0...1999.6 PSIG (for Range 2...8)
Model G:	0...5800 PSIG (for Range 9)
Model H:	0...10875 PSIG (for Range 0)
Model A:	0...4495 PSIG (for Range 4...7) 0...72.5 PSIG (for Range 4) 0...435 PSIG (for Range 5) 0...754 PSIG (for Range 6)
Burst Pressure	
Model D, G and H:	9990.5 PSIG 11600 PSIG (for Model G, Range 0)
Model A:	145 PSIG (for Range 4) 580 PSIG (for Range 5) 1015 PSIG (for Range 6)

Wetted Materials

Isolating Diaphragms:	316L SS
Drain/Vent Valves:	316 SS
Flanges/Adapters:	316 SS
O-ring:	FKM, PTFE as an Option

Non-Wetted Materials

Fill Fluid:	Silicone Oil
Bolts:	Stainless Steel
Housing:	Aluminum or SS, Flameproof (Ex d) and Waterproof (IP67)
Cover O-ring:	NBR

Paint: Epoxy-polyester or Polyurethane

Mounting Bracket: For 2-inch Pipe, 304 SS,
with 304 SS U-bolt

Nameplate: 304 SS

Process Connections: 1/4" NPT with 54.0 mm Center
Distance for Standard Flanges,
1/2" NPT with Process Adapter
(Option)

Mount Position: Upright (Process Connection more
Flexible by using Multi-planar Flange)

Display: 5 Digit LCD

Power Supply: 12...45 V_{DC}
17.5...45 V_{DC} -HART® Communication

Maximum Load: 250 Ω at 17.5 V_{DC}
550 Ω at 24 V_{DC}
Max. Loop Resistance = $\frac{(U - 12 V_{DC})}{0.022 A}$

Loop Load: 0...1500 Ω - Operation
250...550 Ω - HART® Communication

Failure Mode: Fail High: Current ≥ 21.1 mA
Fail Low: Current ≤ 3.78 mA

Electrical Connection: 1/2" NPT Conduit with M4 Screw
Terminals (G1/2 Option)

Output: • Two Wire 4...20 mA, Configurable
for Linear or Square Root Output, Digital
Process Value Superimposed on
4...20 mA Signal, Available to any Host
that Conforms to the HART® Protocol

• Frequency Output for Flowmeter
Model PAD-F with Pulse Width of 10,
50 or 100 ms (Selectable, Negative
Going Pulse)
Output Type: Open Collector, 30 V,
500 mA max.
Pulse Rate: 49 pulses/sec max.
3 seconds

Turn-On Time: IP 67 for Standard (Code S)

Protection: 8.6 lb (Excluding Options) Standard
11.8 lb (SS Housing - Excl. Options)

ATEX Approval

(Option): $\text{Ex II 2G Exd IIC T6...T5}$
 $\text{Ex II 1G or 2G Ex ia IIC T5 or}$
T4 Ga or Gb

Diaphragm Seal Models (Remote Assembly)

(Standard device without additional options (e.g. coatings, special materials etc.).

For dimensions/technical data, see DRM data sheet. Accuracy: 0.075% of calibrated span + influence of seal.

Over and under ranges of the min./max. span may be possible, but must be verified by KOBOLD for each application.

The indicated min./max. spans do not consider any coating of diaphragm seals. For additional information contact KOBOLD.

	A1HP1K5	4"		Ø 64		0...5.8	1450

* Note: Threaded diaphragm seal only available with PAD-G/A. For PAD-D only flange, clamp connections or union nut are possible

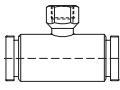

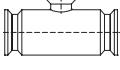

Heavy Duty Differential Pressure Transmitter Model PAD

Diaphragm Seal Models (Direct or Remote Assembly)

(Standard device without additional options (e.g. coatings, special materials etc.).

For dimensions/technical data, see DRM data sheet. Accuracy: 0.075% of calibrated span + influence of diaphragm seal).

Model DRM	Size Code	Size	Note	Ø Diaphragm (mm)	Max. Media Temperature	Min. Span (PSIG)	Max. Span (PSIG)
