

PDA10

Wireless Surveying Tool Kit

WIRELESS SYSTEM

INTRODUCTION

The *handheld* and *target* units may be used to survey wireless signal strength throughout non-hazardous areas of a facility prior to PDW30 or PDW90 equipment installation. The *target* unit is set in a desired installation location and the *handheld* is brought to another installation location. The *handheld* unit will provide an indication of signal strength between the two units. Repeat this process at all desired installation locations to attain an accurate representation of what kind of signal strength to expect after PDW30 or PDW90 installation.

FEATURES

- Convenient, portable Handheld Unit and Target Unit
- 32-Character Dual-Line Alphanumeric Dot Matrix LCD with Backlight
- Buttons for Cycling Through Network IDs, Repeaters, and Field Units
- Carrying Case with Instructions and includes CD Manual Inside
