

LEVEL CONTROLLER (LC-2)

The LC-2 Level Controller will control a pump or solenoid valve to automatically regulate the level in a tank. A third float provides a built-in emergency alarm for over filling.

Easy installation: simply adjust the pipe depths with thumbscrews, and plug in the piggyback power cord. No tools needed. No hard wiring.

Designed to take abuse in wet corrosive industrial environments. Equipped with a very loud warbling audio alarm that will be heard over the loudest industrial noise.

Many features to suit your application include

- Snooze alarm option.
- Relay output to control pumps. (15A)
- Can be mounted anywhere from open tanks to drums.
- Strobing Beacon light.
- Battery power option.
- Wireless transmitter option.

Different modes set on the pcb allow pump filling or tank empty behaviors in the same unit. The convenient test button silences the buzzer, and also allows testing the pump.
