Needle Valves Model NVN

Description

The KOBOLD NVN line of needle valves is an ideal economical solution for small diameter piping installations. Available in zinc-nickel plated steel, electropolished stainless steel, and brass, all are equipped with both a FKM o-ring seal and a PTFE back-up ring below the stem threads to protect the valve from corrosion and galling. The stem threads are rolled for greater strength and ease of operation and the T-shaped handle makes for easy adjustments. The NVN 100 series offers a compact valve and both hard seat and soft tip options for your smallest piping needs. For bigger pipes, the NVN 400 series offers a metal to metal hard seat design and the NVN 500 series offers a precision molded replaceable soft seat design. Both the 400 and 500 series have a blow-out proof stem that provides a secondary stem seal in the full open position. They also feature a slotted spring pin to prevent accidental loosening.
