ZDM

- Viscosities up to 100,000 cSt
- Accuracy:  $\pm 0.3\%$  of Flow
- Pressure: to 6500 PSIG
- Can Detect Flow Direction
- Handles a Variety of Lubricating Fluids

**Positive Displacement Flowmeter Model ZDM**

**Description**

The ZDM is designed for difficult metering that requires precision. Available in either stainless steel or cast iron, it offers a state-of-the-art solution. Capable of operating at pressures to 6500 PSI and temperatures from -40°F to 410°F, it is rugged enough to operate under demanding requirements. It has the ability to precisely meter fluids with viscosities ranging from 1 cSt to 100,000 cSt. All liquids that can be pumped and have known lubrication properties can be measured, for example: gasoline, paraffin, kerosene, diesel, mineral oils, hydraulic oils, inks, dyes, paints, greases, polyurethane, glues, pastes, creams, resins, waxes, and many others.

<sup>1)</sup>Range Code 50 is only available for cast iron versions.

<sup>2)</sup> Ranges based off of 21 cSt media. Media with a viscosity above or below this value may alter the effective range.

\* With your order, please also submit the media type, the operating pressure, and the viscosity at operating temperature.

**Options**
